Objective & Business Outcome

Bring every DG onto IOsense, and turn low-fuel and maintenance conditions into vendor work orders that are tracked from creation to completion.

CURRENT PROCEDURE

OBJECTIVE

BUSINESS OUTCOME

01

DG Refilling

Fuel monitoring · vendor refuelling

WORKFLOW

Low-fuel alert → refill work order → invoice

-  **Fuel level checked physically** at the store; no live view across stores
-  **Refill request raised by phone / message**; litres and proof tracked offline
-  **No consolidated record** of litres, vendor and timing per store for reconciliation

 No live visibility

 Draft · for review

-  **Monitor every DG live**: fuel %, litres, running hours, kWh and operating status
-  **Raise one alert and one refill work order** when the level stays below the limit for the waiting time
-  **Assign to the primary refilling vendor's SPOC**: acknowledge, refuel, enter litres, upload proof, submit

-  **Refills triggered by data**: one alert, one work order, no duplicates
-  **Every litre on record**: quantity, vendor, SPOC and timestamps against one Work Order ID
-  **Store-to-zone visibility**: dashboards and downloads by zone, city, store and vendor
-  **Billed from the same record**: line items roll into an invoice posted to Oracle Fusion

02

DG Maintenance

Preventive · breakdown

WORKFLOW

Running hours / period / breakdown → maintenance work order

-  **Service due tracked manually** per DG from hour-meter readings and dates
-  **Breakdowns reported by phone**; no central view of open jobs or history
-  **Service history scattered** across vendor reports and messages

 Manual tracking

 Draft · for review

-  **PM due on running-hours limit or fixed period**, whichever occurs first — set per DG
-  **Breakdown work order raised in the platform** by the store user / maintenance team
-  **AMC vendor SPOC acknowledges**, carries out maintenance, submits details and proof

-  **PM never missed**: work order created automatically when a limit or period is reached
-  **Shared visibility**: open tickets, PM schedules and repair history for store, central and vendor users
-  **Complete service history per DG**: trigger, vendor, timestamps and details
-  **One platform**: same work-order logic and access rules for both workflows

Solution Architecture

What comes in from each DG, what the application decides, and what the vendor and Flipkart users get.

How It Works

Three screens: the alert the store sees, the work order the system raises, and the vendor closing it on a phone.

Sample data · illustrative values

1 Low-fuel alert

Store User

app.iosense.io/dg/blr-014

IOSense · DG Monitoring

Store User

DG-01 BLR-014 · Bengaluru Running

Fuel level
14 %

Estimated fuel
168 L

⚠️ **Low fuel — below the 20 % limit for 15 minutes**
Alert raised · refill work order WO-1042 created

☒ Raise refill work order Manual trigger, any time

Fuel drops below the limit. One alert and one refill work order — or the store raises one on demand.

2 Work order assigned

System

app.iosense.io/work-orders/WO-1042

IOSense · Work orders

Central User

WO-1042 Refill Assigned

DG & store	Trigger
DG-01 · BLR-014	Low fuel · 14 %
Vendor	SPOC
FuelCo Logistics	R. Kumar

Created ☒ Assigned ☒ **Acknowledged** ☐ Refueling ☐ Submitted ☐ Completed ☐

📩 **Notified** email · WhatsApp · in-app

→ Next: the vendor SPOC acknowledges and refuels

Assigned automatically. Unique work order ID, routed to the mapped vendor SPOC and notified.

3 Vendor submits

Vendor SPOC

INV-2026-204

Posted to Fusion

Vendor	Billing period
FuelCo Logistics	Sep 2026

Total refill charges	Total fuel charges
₹ 4,800	₹ 1,40,890

Invoice amount	Submitted
₹ 1,45,690	01 Oct 2026 · 11:20

4 work orders locked · cannot be billed again

Oracle Fusion · API response logged on the audit trail

Vendor picks period and basis. The platform lists unbilled, completed work orders with their billing basis.

One invoice, itemised. Refilling charge per event plus the fuel or running-hours charge, from the vendor's rate card.

Locked and posted. Work orders can never be billed twice; the payload goes to Oracle Fusion via API.

Refilling invoice

Refill charge per refuelling event + fuel or running-hours charge

Per Litre Fuel Rate

Running Hours Rate

AMC invoice

Maintenance work orders in the period, at the fixed contract rate per DG

Fixed Rate AMC

Proposed · to confirm

Solution Architecture

Preventive maintenance from running hours or a fixed period, breakdowns from the store — both closed by the AMC vendor.

1 TRIGGERS

2 EVALUATE & CREATE

4 OUTPUTS

Built-in rules & safeguards
as per the SRS

Whichever first
Hours limit or fixed period, set per DG

Multiple AMC vendors
Several vendors mapped to one DG or site

Same vendor, both roles
Refilling and AMC, same or separate SPOCs

Reassignment
Moved to another mapped vendor; same ID

Deactivation
History kept when a DG or vendor is inactive

Status names
Finalised during UI design

How It Works

Three screens: the rules set per DG, the work order they raise, and the AMC vendor closing it on a phone.

Sample data · illustrative values

1 Maintenance due

Super Admin

Rules set once per DG. Running-hours limit or fixed period — whichever comes first raises the work order.

2 Work order raised

System

Raised and assigned. Preventive from the trigger, breakdown from the store; routed to the AMC vendor.

3 Vendor submits

AMC vendor

Vendor closes it. Action taken, parts replaced, clearance and proof, submitted from a phone.

Network Architecture

Faclon supplies the field hardware and the cloud; data flows from each DG to IOsense and out to users, vendors and Oracle Fusion.

REF	LINK / COMPONENT	WHAT FLOWS	CONFIGURATION TO SET UP	STATUS
1	DG controller → IoT device	Fuel %, litres, running hours, kWh, operating status per DG	Controller make / model and Modbus register map per DG	⚠ TBC
2	Gateway → IOsense cloud	Buffered DG data pushed over MQTT / HTTPS on the Faclon 4G SIM	Supplied, installed and commissioned by Faclon	✅ Defined
3	Flipkart & vendor users ↔ app	Dashboards, masters, work orders, vendor submissions, downloads	User list and roles; store, DG, vendor and SPOC masters	⚠ TBC
4	Application → notifications	Initial work-order notification	Email sender; WhatsApp Business account and templates	⚠ TBC
5	Application → Oracle Fusion	Invoice payload with refill and fuel line items; API response logged	Fusion API spec, authentication, codes and payload	⚠ TBC
•	Hosting	IOsense platform and the application	Faclon-hosted cloud; HTTPS access over the internet	✅ Defined
•	Data retention	Telemetry, transactions, audit history	IOsense platform data-retention policy	✅ Defined

Scope of Work

What FacloM Labs delivers and what Flipkart provides for the DG monitoring, refilling and maintenance workflows.

FacloM Labs scope design, build, integrate, deploy and support

Hardware, connectivity & installation

- **Supply:** IoT device and gateway per store, 4G SIM and data — warranty and hardware AMC included
- **Install & integrate:** commissioning at every store; existing DG controller read over RS-485 / Modbus

DG monitoring on IOsense

- **Live DG views:** fuel level, volume, running hours, kWh and status; store, city and zone views

Workflow 01 · Fuel management & vendor refilling

- **Masters & settings:** store, DG, vendor & SPOC masters; low-fuel limits; waiting time; rate cards
- **Refill cycle:** alert → work order → assignment → vendor portal → completion, with audit history

Workflow 02 · Preventive & breakdown maintenance

- **PM & breakdown:** triggers per DG; work order to the AMC vendor; details and proof; shared history

Billing, Oracle Fusion & services

- **Billing to Fusion:** line items, eligible transactions, invoice upload, locking, posting to Oracle Fusion
- **Also included:** notifications, dashboards and downloads · SOP · training · UAT · go-live support

Optional scope · automated report scheduling and distribution — schedule and recipients to be finalised

Responsibility to be agreed Vendor SPOC account creation and onboarding · WhatsApp message-template approval

Flipkart scope inputs, access and infrastructure

Store master (zone, city, store, email IDs), DG master and the user list with roles

Refilling and AMC vendor list, SPOC contacts, vendor-to-DG mapping and rate cards

Low-fuel limits, waiting time and PM settings (running-hours limit / fixed period) per DG

Site access to each store and DG for installation and commissioning

Power supply and mounting space for the gateway; store network access where used

Oracle Fusion interface specification, authentication and credentials

WhatsApp Business account and email sender for the work-order notifications

Software Deliverables

One application on the IOsense cloud, delivered as six capabilities.

DG Fuel Management & Maintenance Application

 Mobile-responsive web

 IOsense cloud

01

DG Monitoring on IOsense

Every DG live — fuel level, volume, running hours, energy and operating status, from store to zone.

02

Alerts & Work Orders

Low fuel, maintenance due and breakdown raise a work order automatically and assign it to the mapped vendor.

03

Vendor Portal

Vendor SPOCs acknowledge, execute and submit litres or maintenance details with proof, from any device.

04

Billing & Oracle Fusion

Line items per transaction, invoice with upload and locking, posted to Oracle Fusion over the API.

05

Dashboards & Reports

Operational and financial views, filters and CSV / Excel downloads, limited to each user's access.

06

Access Control & Audit

Store, central, vendor, maintenance and super-admin roles, with a full audit history of every action.

Services included

 User manual / SOP

 Operator & vendor training

 UAT and go-live support

 Post go-live support

Implementation Milestones

From kick-off to go-live — hardware, application, billing and Fusion; the week-by-week plan follows on the next slide.

01-02

DG Online Monitoring

Refilling · Maintenance

APPLICATION

DG Fuel Management & Maintenance Application on the IOsense cloud

MILESTONE 1

Kick-off & requirement sign-off

Scope, masters, thresholds, PM settings, billing rates and the Fusion interface signed off

🕒 Signed-off SRS

MILESTONE 2

Hardware supply & installation

IoT devices, gateways and SIMs delivered, installed and commissioned; DG controllers integrated

🕒 DGs live on IOsense

MILESTONE 3

Application development

Masters, alert engine, work orders, vendor portal, billing engine and dashboards

🕒 Build complete

MILESTONE 4

Configuration & integration

Masters loaded, notifications connected and the Oracle Fusion interface integrated

🕒 System configured

MILESTONE 5

UAT

End-to-end refill, maintenance and billing cycles with store, central and vendor users

🕒 UAT sign-off

MILESTONE 6

Go-live & handover

Go-live across stores, user manual / SOP and training; post go-live support begins

🕒 Live + handover

Inputs needed from Flipkart

at each milestone, so the plan holds

M1

↳ SRS sign-off

↳ Store & DG masters

↳ Limits & PM settings

M2

↳ Site access

↳ Power & mounting

↳ Store & DG list

M3

↳ Clarifications on rules

M4

↳ Vendor & SPOC list

↳ WhatsApp / email setup

↳ Fusion API spec

M5

↳ Users for UAT

↳ Test stores / DGs

M6

↳ Rollout store list

↳ Go-live schedule

Project Delivery Schedule

Indicative plan from kick-off. Hardware supply and store-by-store installation run alongside the application build.

Basis: indicative durations from kick-off. Installation and commissioning run store by store and depend on the final store count; Fusion integration depends on the specification from Flipkart.

Commercials

Commercial summary including hardware, software, billing and Oracle Fusion. Amounts to be filled in.

#	LINE ITEM	DESCRIPTION	TYPE	AMOUNT
01	Hardware supply & installation	IoT device and gateway per store, mounting and accessories; installation, commissioning and integration to the existing DG controller at each store — warranty included	One-time	
02	Software development & implementation	DG Fuel Management & Maintenance Application: monitoring, alerts, work orders, vendor portal, vendor billing and Oracle Fusion integration; deployment on the IOsense cloud	One-time	
03	IOsense platform licence	Cloud platform licence for the DG monitoring and workflow application — licence basis (per DG / per store) TBC	Annual	
04	Connectivity	4G SIM and data plan per store gateway	Annual	
05	Annual support / AMC	Software support and hardware AMC after the warranty period	Annual	
06	Optional · Automated reports	Scheduled report generation and distribution — schedule and recipients to be finalised	One-time · optional	

One-time total

Hardware supply & installation + Software development & implementation

Amount

Annual recurring total

IOsense platform licence + Connectivity + Annual support / AMC

Amount

Hardware quantities to be confirmed against the final store and DG count; existing DG controllers are read, not replaced.

Taxes, payment terms and validity to be stated with the amounts.

Warranty period, hardware AMC start, licence basis and post go-live support duration to be confirmed.

Open Points to Confirm

Items to close with Flipkart before requirement sign-off. Tags show the workflow each point applies to: 01 refilling, 02 maintenance.

Hardware & site

- 01 DG controller make / model, protocol and Modbus register map per DG — for the gateway integration 01 02
- 02 Store and DG count for the rollout — drives hardware quantities, licence basis and installation plan 01 02
- 03 Site readiness at each store: power supply, mounting space and network / signal availability 01 02
- 04 Estimated fuel volume (L): read from the controller or derived on IOsense from tank capacity 01

Billing & Oracle Fusion

- 08 Fusion interface specification: endpoint, authentication, codes and payload format 01
- 09 Rate cards: diesel rate, running-hours rate and vendor refilling charges; billing type per site 01
- 10 AMC vendor billing (Fixed Rate AMC in Flipkart's version) — not covered by the SRS billing flow 02

Business rules

- 05 Low-fuel limits per level and the waiting time before an alert is raised 01
- 06 PM running-hours limits and fixed maintenance periods per DG (e.g. 250 / 500 h) 02
- 07 Work-order status names — to be finalised during UI design 01 02

Users, notifications & plan

- 11 User list and roles; vendor and SPOC onboarding — who creates and maintains the accounts 01 02
- 12 WhatsApp Business account, message templates and email sender for the initial notification 01 02
- 13 Warranty period, hardware AMC start, post go-live support duration and schedule confirmation 01 02

Proposed next steps

1 Walk-through of this proposal with Flipkart

2 Close the open points and sign off the SRS

3 Site survey and hardware order for the first stores

4 Kick-off and start of the delivery schedule
